

Registration

So you are ready to get registered for WebWorK!? Excellent. The process is not too difficult.

1. Navigate your way over to <https://secure.willamette.edu/webwork2/Physics110/>. On the right side of the screen, you should see a little welcome message confirming that this is the place to login to the Astronomy WebWorK course. You'll be coming here often, so it might be worthwhile to bookmark this page.
2. On the left you can enter in your user name and initial password:
 - Your user name is the first part of your WU email address (before the @)
 - Your default password is your student ID number

Go ahead and click "Continue" or press Enter.

3. You should arrive at your home screen inside the WebWorK Astronomy page. A little course info box to the right should confirm that. To the left you can see options to view the available homework sets, grades, or your settings. Click on "User Settings" and then proceed to change your password to whatever password you prefer. I don't have access to these, so make sure you remember it! (Though I can reset your password if need be at some point.)
4. Click "Change User Settings" at the bottom to confirm your new password and you are good to go! If you click on Homework Sets you should be able to see the first tutorial assignment and get started! Good luck!
